

BIODOME

WATERLESS URINAL

WWW.WASHROOMSOLUTIONS.CO.ZA

GREEN BUILDING COUNCIL SA

MEMBER ORGANISATION

- Internal one-way valve with odour seal
- Low cost replaceable outlet
- Contains a biological, fragranced enzyme block
- Retrofits most current outlet systems
- Anti-tamper features
- Silent from possible back pressure
- Strong mint fragrance
- No chemical dosing systems required
- No ice blocks or duo blocks
- No maintenance of flushing mechanisms
- No hard or soft scale problems
- No uric salt build up

The Bio Dome system is a patented mechanical trap providing the most advanced environmental solution for urinals, especially when running waterless systems. The Bio Dome has a built-in odour locking seal, preventing the escape of unpleasant odours associated with urinals.

The advanced design provides a system where the biological enzymes are slowly released from the fragranced block and they multiply x 8 from their original numbers.

The entire design and biological process eliminates the most common problems associated with urinals namely; smell, hard and soft scale build up, uric acid and uric salt build up in waste pipes, breaks down released body fats and bio mass.

The Bio Dome system provides the complete solution for allowing water saving, whilst creating a natural fresh smell within the washroom environment.

The system has been so cleverly designed that it can retro-fit into most current waterless systems and the twist and lock system of the replaceable cartridge allows for easy installation and maintenance.
